

***2-Bit Bidirectional Voltage-Level Translator for Open-Drain and Push-Pull Application*****UM3202Q DFN8 1.70×1.35****UM3202A QFN10 1.80×1.40****UM3202H CSP8 1.90×0.90****General Description**

The UM3202Q/3202A/3202H is  $\pm 15\text{kV}$  dual channel ESD-protected level translator provide the level shifting necessary to allow data transfer in a multi-voltage system. Externally applied voltages,  $V_{CCB}$  and  $V_{CCA}$ , set the logic levels on either side of the device. A low-voltage logic signal present on the  $V_{CCA}$  side of the device appears as a high-voltage logic signal on the  $V_{CCB}$  side of the device, and vice-versa. The UM3202Q/3202A/3202H bidirectional level translator utilizes a transmission-gate based design to allow data translation in either direction ( $V_{CCA} \leftrightarrow V_{CCB}$ ) on any single data line. The UM3202Q/3202A/3202H accepts  $V_{CCA}$  from +1.65V to +3.6V and  $V_{CCB}$  from +2.3V to +5.5V, making it ideal for data transfer between low-voltage ASICs / PLDs and higher voltage systems.

The UM3202Q/3202A/3202H enters a three-state output mode to reduce supply current when output enable (OE) is low. The UM3202Q/3202A/3202H is designed so that the OE input circuit is supplied by  $V_{CCA}$ .  $\pm 15\text{kV}$  ESD protection on the  $V_{CCB}$  side for greater protection in applications that route signals externally.

The UM3202Q is a dual level translator available in DFN8 1.70×1.35, the UM3202A is a dual level translator available in QFN10 1.80×1.40, and the UM3202H is a dual level translator available in CSP8 1.90×0.90 package.

**Applications**

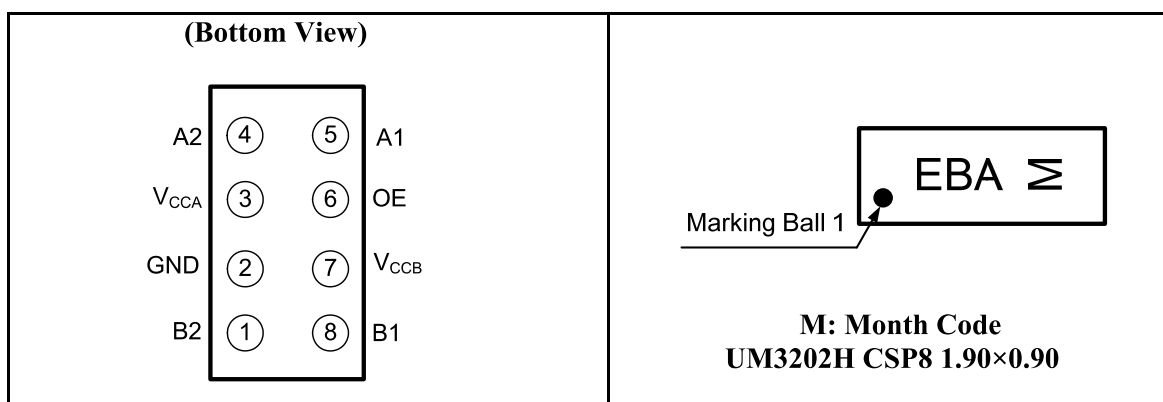

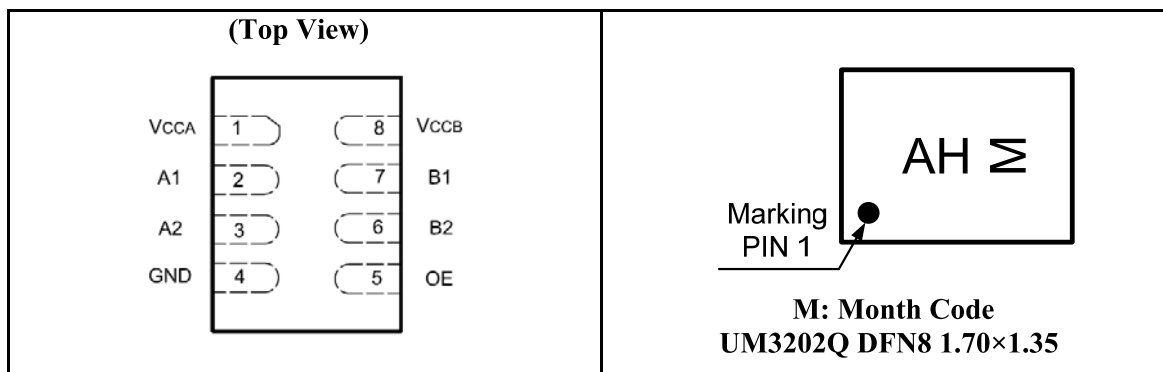

- SPI, MICROWIRE, and I<sup>2</sup>C Level Translation
- Low-Voltage ASIC Level Translation
- Smart Card Readers
- Cell-phone Cradles
- Portable POS Systems
- Portable Communication Devices
- Low-Cost Serial Interfaces
- Cell-Phones
- GPS
- Telecommunications Equipment

**Features**

- Max Data Rates:  
24Mbps(Push Pull),  
2Mbps(Open Drain)
- Bidirectional Level Translation
- 1.65V to 3.6V on A port and 2.3V to 5.5V on B port ( $V_{CCA} \leq V_{CCB}$ )
- $\pm 15\text{kV}$  ESD Protection on B port
- No Power-Supply Sequencing Required  
 $V_{CCA}$  or  $V_{CCB}$  Can Be Ramped First
- DFN8, QFN10 and CSP8 Packages

## Pin Configurations

## Top View

## Pin Description

| Pin Name         | Function  |
|------------------|---|
| V <sub>CCA</sub> | A-Port supply voltage. $1.65V \leq V_{CCA} \leq 3.6V$ and $V_{CCA} \leq V_{CCB}$                        |
| A1               | Input/Output 1. Referenced to V <sub>CCA</sub>  |
| A2               | Input/Output 2. Referenced to V <sub>CCA</sub>  |
| GND              | Ground  |
| OE               | 3-state output enable. Pull OE low to place all outputs in 3-state mode. Referenced to V <sub>CCA</sub> |
| B2               | Input/Output 2. Referenced to V <sub>CCB</sub>  |
| B1               | Input/Output 1. Referenced to V <sub>CCB</sub>  |
| V <sub>CCB</sub> | B-Port supply voltage. $2.3V \leq V_{CCB} \leq 5.5V$  |

## Ordering Information

| Part Number | Packaging Type | Marking Code | Shipping Qty              |
|-------------|----------------|--------------|---------------------------|
| UM3202Q     | DFN8           | AH           | 3000pcs/7Inch Tape & Reel |
| UM3202A     | QFN10          | AA           | 3000pcs/7Inch Tape & Reel |
| UM3202H     | CSP8           | EBA          | 3000pcs/7Inch Tape & Reel |

## Absolute Maximum Ratings (Note 1)

Over operating free-air temperature range (unless otherwise noted)

| Symbol           | Parameter  | Value              | Unit |
|------------------|--|--------------------|------|
| V <sub>CCA</sub> | Supply Voltage Range   | -0.5 to +4.5       | V    |
| V <sub>CCB</sub> | Supply Voltage Range   | -0.5 to +6.5       | V    |
| V <sub>I</sub>   | Input Voltage Range  | A ports<br>B ports | V    |
| V <sub>O</sub>   | Voltage Range applied to any output in the high-impedance or power-off state | A ports<br>B ports | V    |
| V <sub>O</sub>   | Voltage Range applied to any output in the high or low state (Note 2)        | A ports<br>B ports | V    |
| I <sub>IK</sub>  | Input Clamp Current  | V <sub>I</sub> < 0 | mA   |
| I <sub>OK</sub>  | Output Clamp Current   | V <sub>O</sub> < 0 | mA   |
| I <sub>O</sub>   | Continuous Output Current  | ±50                | mA   |
|                  | Continuous Current through V <sub>CCA</sub> , V <sub>CCB</sub> , or GND      | ±100               | mA   |
| T <sub>OP</sub>  | Operating Temperature Range  | -40 to +85         | °C   |
| T <sub>STG</sub> | Storage Temperature Range  | -65 to +150        | °C   |

Note1. Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Note2. The value of V<sub>CCA</sub> and V<sub>CCB</sub> are provided in the recommended operating conditions table.

## Recommended Operating Conditions (Note 1, 2)

| Symbol           | Parameter                          |                          | V <sub>CCA</sub> | V <sub>CCB</sub> | Min                    | Max                    | Unit |
|------------------|------------------------------------|--------------------------|------------------|------------------|------------------------|------------------------|------|
| V <sub>CCA</sub> | Supply Voltage                     |                          |                  |                  | 1.65                   | 3.6                    | V    |
| V <sub>CCB</sub> |                                    |                          |                  |                  | 2.3                    | 5.5                    | V    |

## Applications Information

The UM3202Q/3202A/3202H can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The UM3202Q/3202A/3202H is ideal for use in application where an open-drain driver is connected to the data I/Os. The UM3202Q/3202A/3202H can also be used in applications where a push-pull driver is connected to the data I/Os, but the UM3302 might be a better option for such push-pull applications.

## Block Diagram

The UM3202Q/3202A/3202H (block diagram see Figure 1) does not require a direction-control signal to control the direction of data flow from A to B or from B to A. Each A-port I/O has an internal 10-k $\Omega$  pullup resistor to  $V_{CCA}$ , and each B-port I/O has an internal 10-k $\Omega$  pullup resistor to  $V_{CCB}$ . During a rising edge, the one-shot turns on the PMOS transistors (PU1, PU2) for a short duration, which speeds up the low-to-high transition.

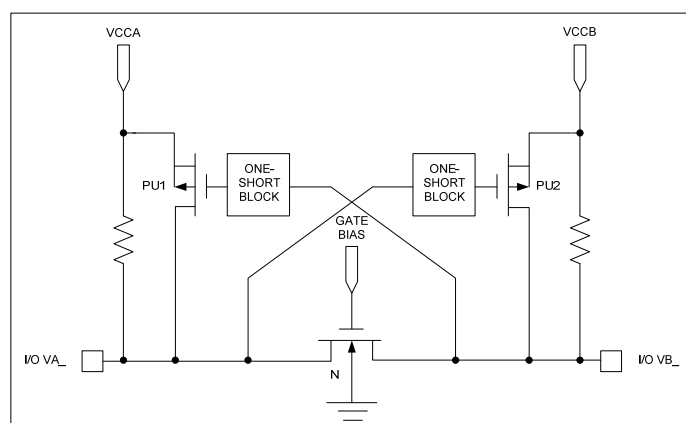

Figure 1 Block Diagram of UM3202Q/3202A/3202H I/O Cell

## Input Driver Requirements

The fall time ( $t_{fA}$ ,  $t_{fB}$ ) of a signal depends on the output impedance of the external device driving the data I/Os of the UM3202Q/3202A/3202H. Similarly, the  $t_{pHL}$  and the maximum data rates also depend on the output impedance of the external driver. The values for  $t_{fA}$ ,  $t_{fB}$ ,  $t_{pHL}$ , and the maximum data rates in the data sheet assume that the output impedance of the external driver is less than 50 $\Omega$ .

## Power Up

During operation, ensure that  $V_{CCA} \leq V_{CCB}$  at all times. During power-up sequencing,  $V_{CCA} \geq V_{CCB}$  does not damage the device, so any power supply can be ramped up first.

## Enable and Disable

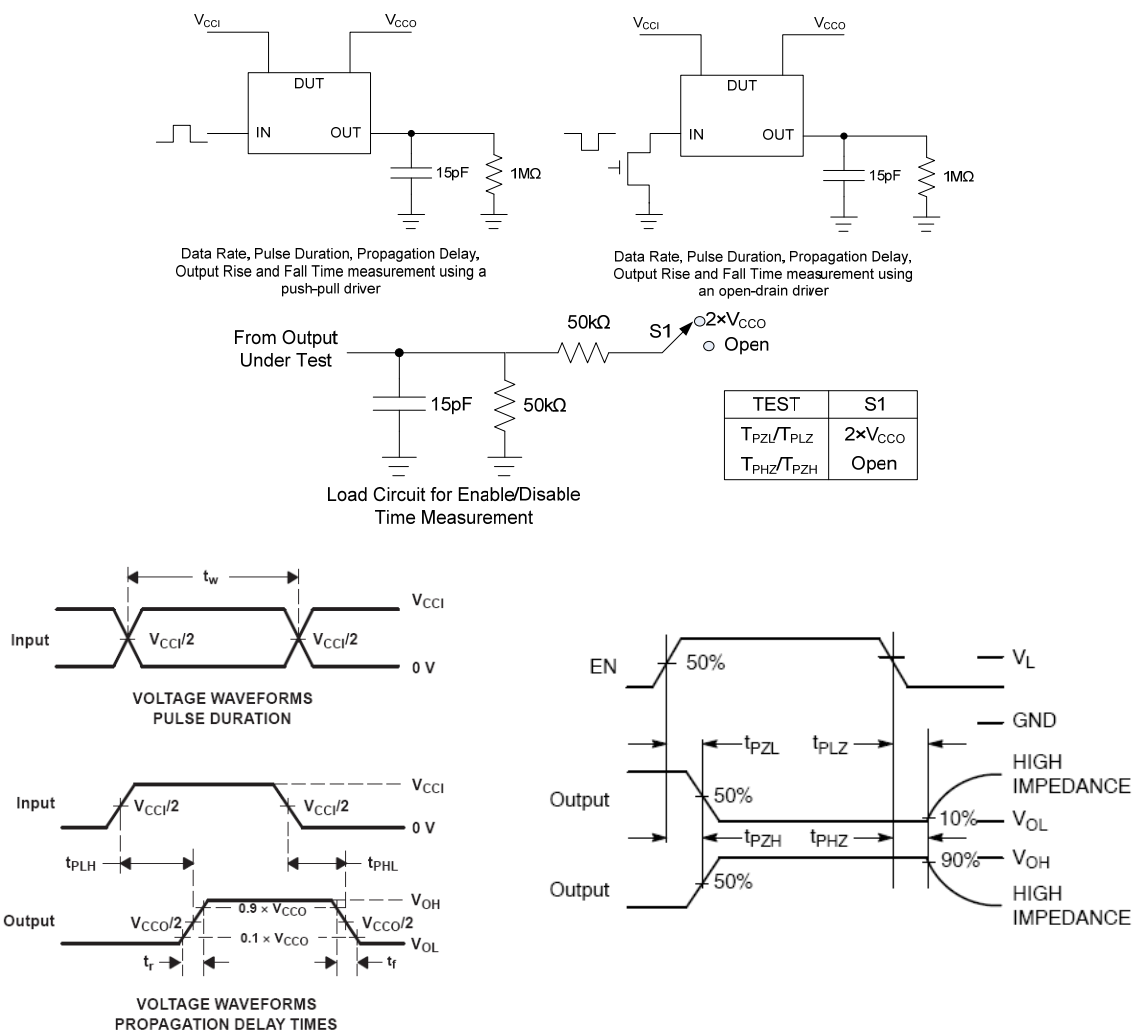

The UM3202Q/3202A/3202H has an OE input that is used to disable the device by setting OE = low, which places all I/Os in the high-impedance (Hi-Z) state. The disable time ( $t_{dis}$ ) indicates the delay between the time when OE goes low and when the outputs actually get disabled (Hi-Z). The enable time ( $t_{en}$ ) indicates the amount of time the user must allow for the one-shot circuitry to become operational after OE is taken high.

## Pullup or Pulldown Resistors on I/O Lines

Each A-port I/O has an internal 10-k $\Omega$  pullup resistor to  $V_{CCA}$ , and each B-port I/O has an internal 10-k $\Omega$  pulldown resistor to  $V_{CCB}$ . If a smaller value of pullup resistor is required, an external resistor must be added from the I/O to  $V_{CCA}$  or  $V_{CCB}$  (in parallel with the internal 10-k $\Omega$  resistor).

## Test Circuits

- $C_L$  includes probe and jig capacitances.
- Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control.  
 Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
- All input pulses are supplied by generators having the following characteristics:  $PRR \leq 100\text{MHz}$ ,  $Z_0 = 50\Omega$ ,  $dv/dt \geq 1\text{V/ns}$ .
- The outputs are measured one at a time, with one transition per measurement.
- $T_{PLZ}$  and  $T_{PHZ}$  are the same as  $t_{dis}$ .
- $T_{PZL}$  and  $T_{PZH}$  are the same as  $t_{en}$ .
- $T_{PLH}$  and  $T_{PHL}$  are the same as  $t_{pd}$ .
- $V_{CCI}$  is the  $V_{CC}$  associated with the input port.
- $V_{CCO}$  is the  $V_{CC}$  associated with the output port.
- All parameters and waveforms are not applicable to all devices.
